DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-21 are rejected under 35 U.S.C. 102(a) as being unpatentable by Stewart (US 6049718A).

Claims 1, 6, 7, and 13-21: With respect to the subject matter of claims 1, 6, 7, and 13-21, Stewart is directed to a telephone system and method with background location response capability, comprising: a main storage 48, and location code storage where the location code is stored (see figure 2, 50), a receive unit for receiving location information (see figure 2, 40). In addition, Stewart summarizes in the abstract that an audio or visual user output device which can produce audio or visual information in an incoming call signal as a corresponding audio or visual display; and an audio user input device which generates an audio output signal corresponding to a user's voice. Therefore, the audio or video data stored in the main storage unit are retrieved when the incoming calls arrive.

Claim 2: The system and method disclosed by Stewart shows that the processor unit 32 (figure 2) is provided for instructing to data storage, and when the instruction is made by said processor, the storage unit is able to correlate and to store data and location information received by the receive unit (see figure 2).

Claims 3-5: Stewart discloses the act of prompting the user to select a location information from among different pre-stored location information and a data select prompting unit for prompting the user to select a data from among various pre-stored data and wherein the storage unit correlates and stores data and location information selected by the user (see abstract).

Claims 10-12: Stewart discloses that the portable telephone 28 has a GPS receiver 46, and the location information is obtained from this GPS receiver (see figure 2, 46).

Response to Amendment

In response to the applicant that neither the Bloebaum nor Naruse discloses the "correlating" process as recited in the claimed invention.

The examiner has found that the reference of Stewart (US 6049718A) reads on the limitations of claims 1-21. Thus the application is now set in a condition for non-final rejection.
